# RISKS

The cause of the majority of pancreatic cancer cases is unknown. There is evidence that the following may increase your risk of pancreatic cancer.

- AGE
- OBESITY
- PANCREATITIS
- SMOKING
- DIABETES
- FAMILY HISTORY

# SYMPTOMS

The symptoms of pancreatic cancer are often vague and may at first appear to be associated with other less serious and more common conditions.

- STOMACH PAIN
- MID-BACK PAIN
- UNEXPLAINED WEIGHT LOSS
- JAUNDICE (Yellowish Eyes or Skin)
- LOSS OF APPETITE, NAUSEA
- INDIGESTION
- CHANGES IN STOOL
- NEW-ONSET DIABETES

If you are experiencing one or more of these symptoms or think you are at an increased risk for pancreatic cancer, speak to your healthcare provider today.
