Know the risks & symptoms of Pancreatic Cancer
Early Detection Saves Lives

RISKS
The cause of the majority of pancreatic cancer cases is unknown. There is evidence that the following may increase your risk of pancreatic cancer.

- AGE
- OBESITY
- PANCREATITIS
- SMOKING
- DIABETES
- FAMILY HISTORY

SYMPTOMS
The symptoms of pancreatic cancer are often vague and may at first appear to be associated with other less serious and more common conditions.

- STOMACH PAIN
- MID-BACK PAIN
- UNEXPLAINED WEIGHT LOSS
- JAUNDICE (Yellowish Eyes or Skin)
- LOSS OF APPETITE, NAUSEA
- INDIGESTION
- CHANGES IN STOOL
- NEW-ONSET DIABETES

If you are experiencing one or more of these symptoms or think you are at an increased risk for pancreatic cancer, speak to your healthcare provider today.
